Many Natural Wet Loose Avalanches in Frazier

Frazier Basin
Bridger Range
4/20/2020
Code
WL-N-R2-D1.5-I
Elevation
9000
Aspect Range
SE-E
Latitude
45.92330
Longitude
-110.98000
Notes

In Frazier, all surfaces except the upper north faces were getting wet and sticky. We observed lots of wet loose avalanches actively happening on SE-E facing slopes. There was one small crown on a steep East facing slope that looked to be from the most recent storm but everything else was loose wet. Small wind slabs from the last snow seemed to be glued down today.
