Natural Avalanches BSSP

Date
Fri, 12/15/2023 - 14:50

Big Sky Ski Patrol reported two natural avalanches, seen today (12/15) in closed terrain.

From email:

"It looks possible that they released at two different times during the day today.....It looks to be the storm snow, which was sitting on lower-density snow at the old snow interface. That interface likely had a layer of faceted snow on top of the old, crusty snow. "
