Cracking and Collapsing North of Cooke City

Date
Thu, 12/14/2023 - 11:25
Activity
Skiing

Today I was skiing a south facing slope between 8500-9500 ft near Mt Henderson. I observed at least ten large collapses, some of which sent cracks 30 feet long. This slope had a shallow snowpack relative to the rest of the area.

Region
Cooke City
