Recent avalanches and wet snow

Date
Sun, 03/17/2024 - 16:30
Activity
Snowmobiling

We rode from Taylor Fork through Cabin Creek on March 17. We saw a few recent slab avalanches that happened after the last snowfall, and some recent natural wet loose avalanches, and a cornice fall. Both (all) of these types of slides are possible for someone to trigger the next 2-3 days.

Melt freeze crust on sunny slopes was 1-1.5" thick with dry snow below. Softened on south-southwest slopes by midday to early afternoon. Shady slopes seemed to be staying dry up high. Skies were mostly clear with calm wind.

Region
Southern Madison
Location (from list)
Cabin Creek
Observer Name
Alex Marienthal
