Long-running wet sluff at Black Mtn

Date
Sat, 07/06/2024 - 11:30
Activity
Snowboarding

Skinned up the large NW snowfield on Black Mountain on Saturday July 6 to lap what remained. Surprisingly, coverage was very good. We descended just after 11am. Turns on the shallower sun-exposed aspects on the way down triggered large sluffs which ran for ~200ft on the top 2-3 inches of the snow.

Region
Out of Advisory Area
Location (from list)
Black Mountain
Observer Name
N. Dea
