

Widespread Collapsing at Mt. Ellis

Mt Ellis

Northern Gallatin

1/1/2019

Code

Latitude

45.57750

Longitude

-110.95600

Notes

Skiers on Mt. Ellis noticed unstable conditions on New Years Day, experiencing multiple collapses. Test pits yielded unstable results, and they found "the base of the old/[faceted snow](#) was comparatively better consolidated but got progressively weaker near the top and would barely stay in the pit wall just under the ~14" of newer snow."
