Activity

Snowmobiling

Hey guys,

A couple wind slab releases from last night/today. The larger one is off the N side of Henderson above the large historic path, NE aspect. Maybe size 1.5, but hard to tell. The smaller one was under sheep mtn on a E aspect. Size 1. Both appeared to be natural. Lots of transport today out north, with dense punchy snow on most aspects. Definitely slabbing up.

Region

Cooke City

Location (from list)

Henderson Mountain
