

Natural slides occurred on Peak 10,024 in Shower Creek basin

Date

Sun, 02/28/2021 - 13:10

Activity

Skiing

Observed two dry-loose slides and one slab avalanche on the NE-facing slope of Peak 10,024 (not sure if it has a local name) in the Shower Creek basin on Sunday - all were presumably naturally triggered. We didn't observe them slide. The slab avalanche may have been from the previous day?

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

Naturals in Shower Creek basin
