

Hyalite Reservoir / Meadows south of the reservoir

Date

Sat, 03/20/2021 - 11:00

Activity

Skiing

Was out for a tour at the meadows above Hyalite Reservoir. We were curious about the water affecting the snow pack, dug a pit on a north-west facing aspect around 7800 feet. Snow pack was 135 cm deep, performed a ECT test and got ECTP 11 on the depth hoar at the ground. Stayed off steep slopes and had a fun mellow powder day.

Region

Northern Gallatin

Observer Name

Spencer Lipsteuer
