

Few Signs of Instability in Lionhead

Date

Sat, 02/11/2023 - 15:00

Activity

Snowmobiling

We rode up Denny Creek to Lionhead Ridge. After that, we rode back towards Watkins and Targhee creeks. We dug a pit on a north facing [aspect](#) at 9000'. We found 5.5' (170 cm) of snow. We had an ECTN27 on a layer of rounding facets ~1 foot below the surface. We had this same result on an E facing [aspect](#). We saw some old avalanche activity under Lionhead Ridge, but there were no signs of recent avalanches.

Region

Lionhead Range

Location (from list)

Lionhead Ridge

Observer Name

Alex Marienthal, Alex Haddad
