Rider Triggered Avalanche on Henderson Mountain

Henderson Mountain Cooke City 3/2/2024 Code HS-AMr-R3-D3-O Aspect E Latitude 45.05240 Longitude -109.94500 Notes

Riders triggered a very large avalanche on the east side of Henderson Mountain while riding across a slope below. No one was caught in the avalanche and the debris pile was estimated 20' deep in spots.

From another obs. "Watched a large avalanche come down the big Avi path on the east side of Henderson. The avalanche covered many snowmobile tracks from that afternoon. The crown varied and extended for 1,000 feet below the summit ridge. It was a huge volume of snow that reached Fisher Creek. The snowmobilers were lucky, as it was large enough to be buried deep."

```
Number of slides
