

Natural Avalanche in Cooke City

Date

Wed, 03/06/2024 - 12:42

Activity

Skiing

East face of Republic Mountain above Erma Mine Cabins. 8800 ft natural avalanche just below the ridge. 3-4 foot crown, Apx 100' across, ran approximately 1000 feet down the creek bed. Appeared to be from earlier in the morning possibly when the avalanche slid off the north face of Republic, as it had a light dusting of snow over the debris. This start zone was just over the ridge from the North facing 9:14 am avalanche but I don't think the start zones were connected.

Region

Cooke City

Location (from list)

Republic Mountain

Observer Name

Dave Eiermann
