

Remotely triggered wet slab Taylor Fork

Date

Mon, 04/15/2024 - 01:05

Activity

Snowmobiling

From IG: A group of riders noted very wet snow west of Cabin Creek and Southwest of the Taylor Fork. They were sinking to the ground where it was unconsolidated. The group remotely triggered a wet [slab](#) avalanche from the ridge top. There were shooting cracks that connected their location to the avalanche. This is an interesting of [persistent weak layer](#) and [wet snow avalanche](#) problems.

Region

Southern Madison

Location (from list)

Taylor Fork

Observer Name

Marcus Harry
