

Avalanche mitigation Tuesday morning

Date

Tue, 04/01/2025 - 07:10

Activity

Skiing

It seemed like the snow would run with a ski cut but would be within the storm snow, leaving 4 inches or so on the bed surface. It was fairly sensitive but cornice drops didn't guarantee an avalanche. Things ran quite a ways with explosives like r2.5-3

Region

Bridger Range

Location (from list)

Bridger Bowl
